Project: Jigg Holder Case

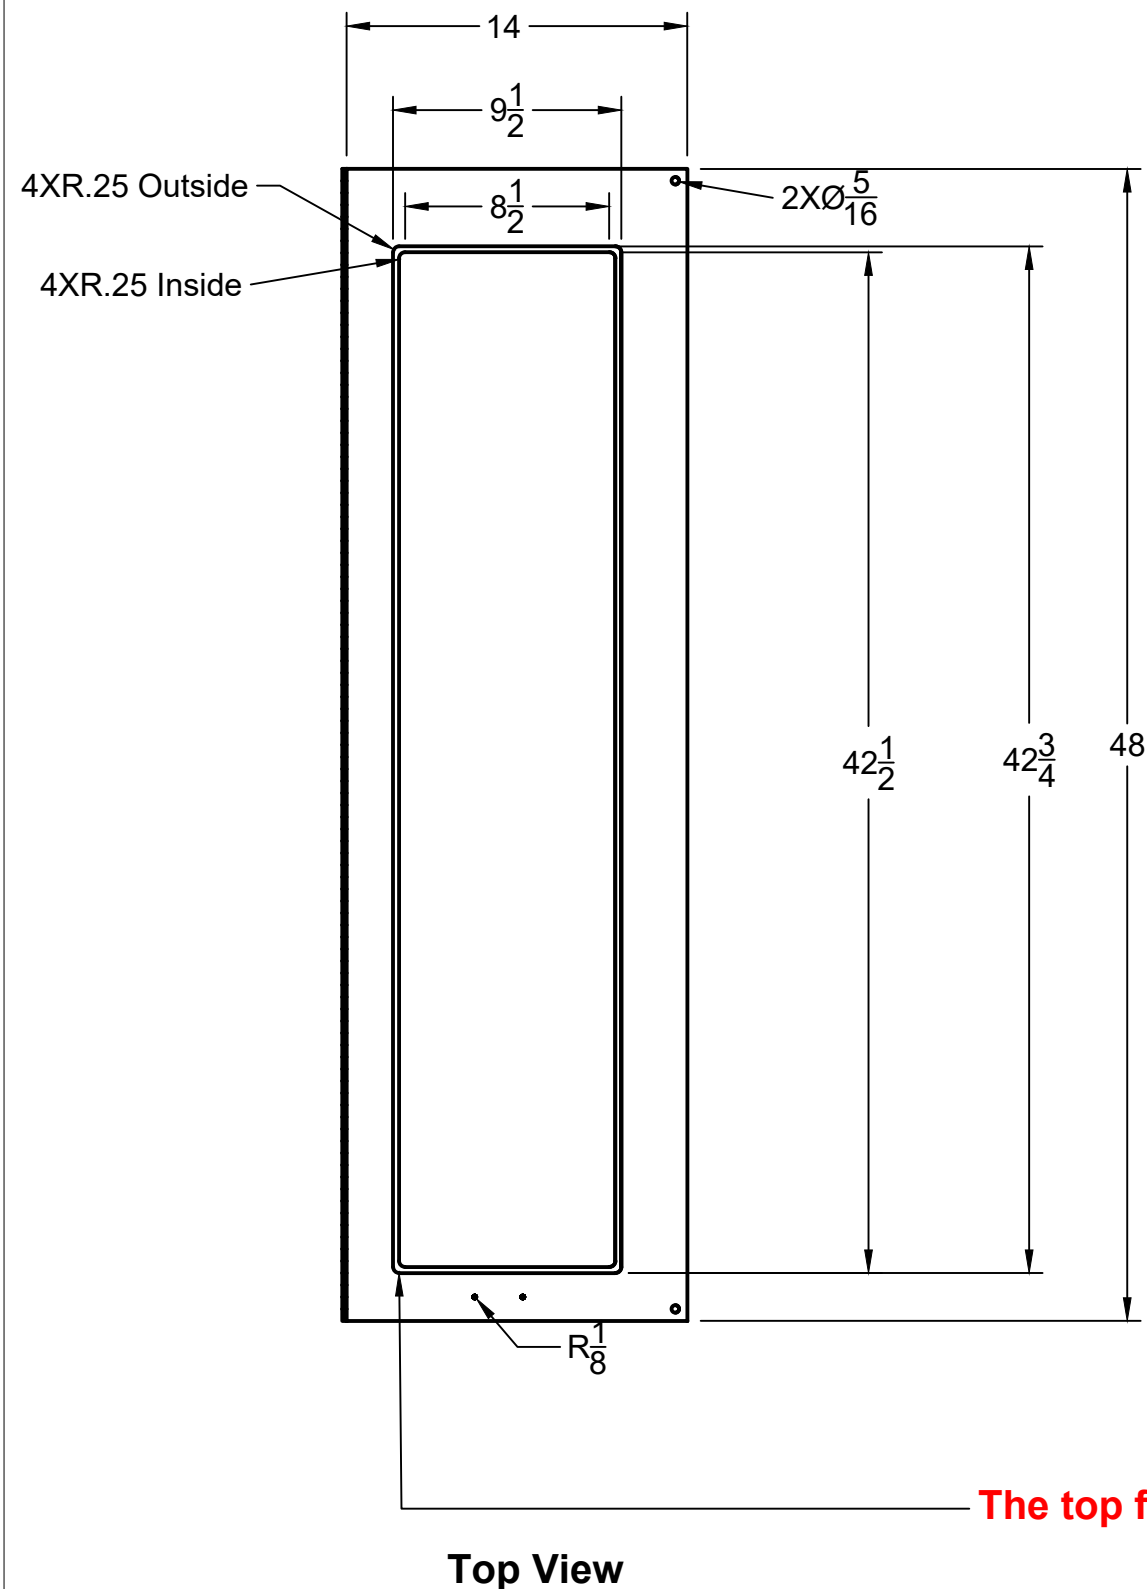

396 15th St.

Description

Baseplate: The baseplate serves as the primary location for positioning jigs during CNC machining processes. These jigs are located within the baseplate and are machined accordingly.

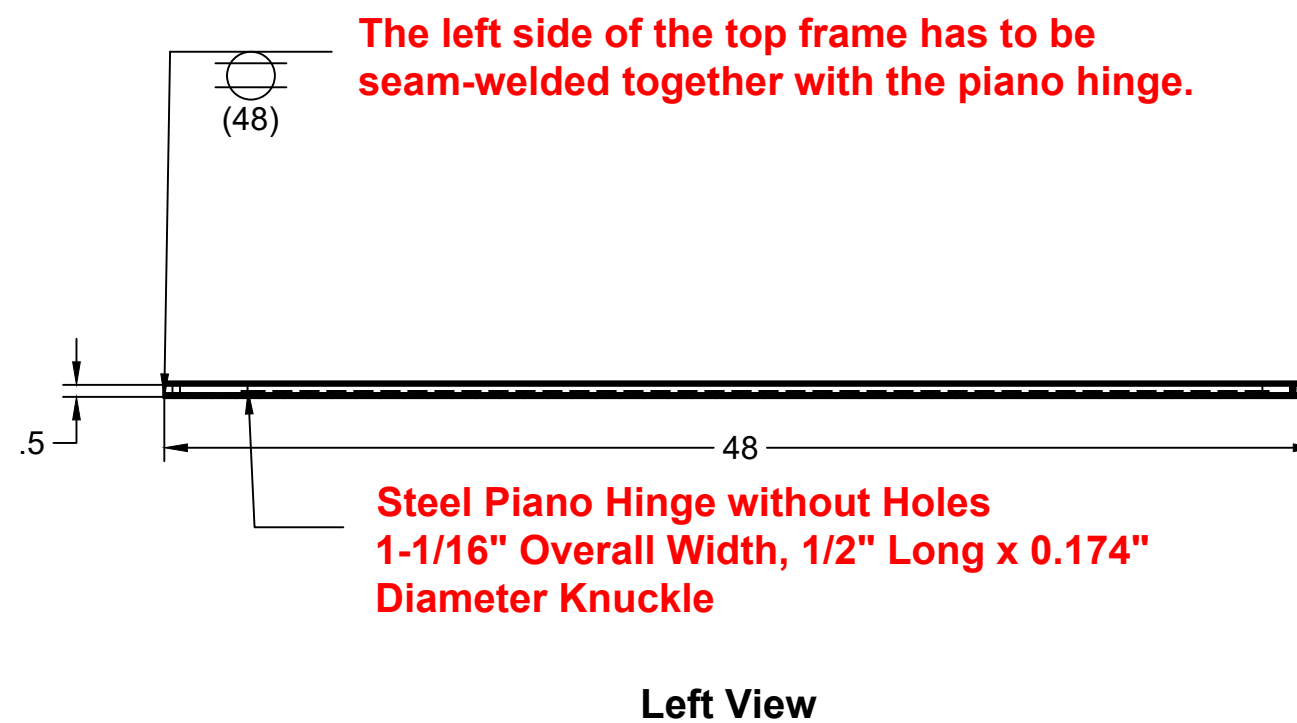

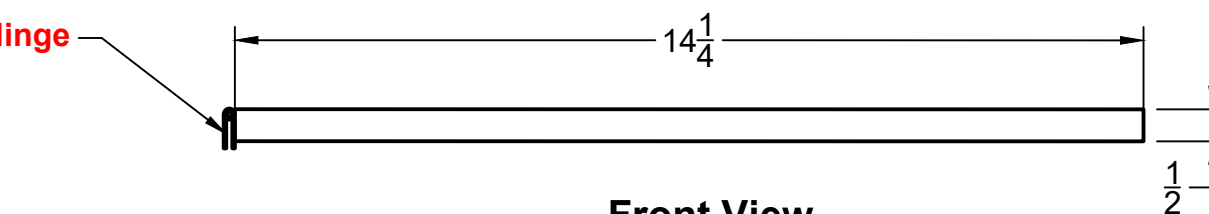

Issue

P-00

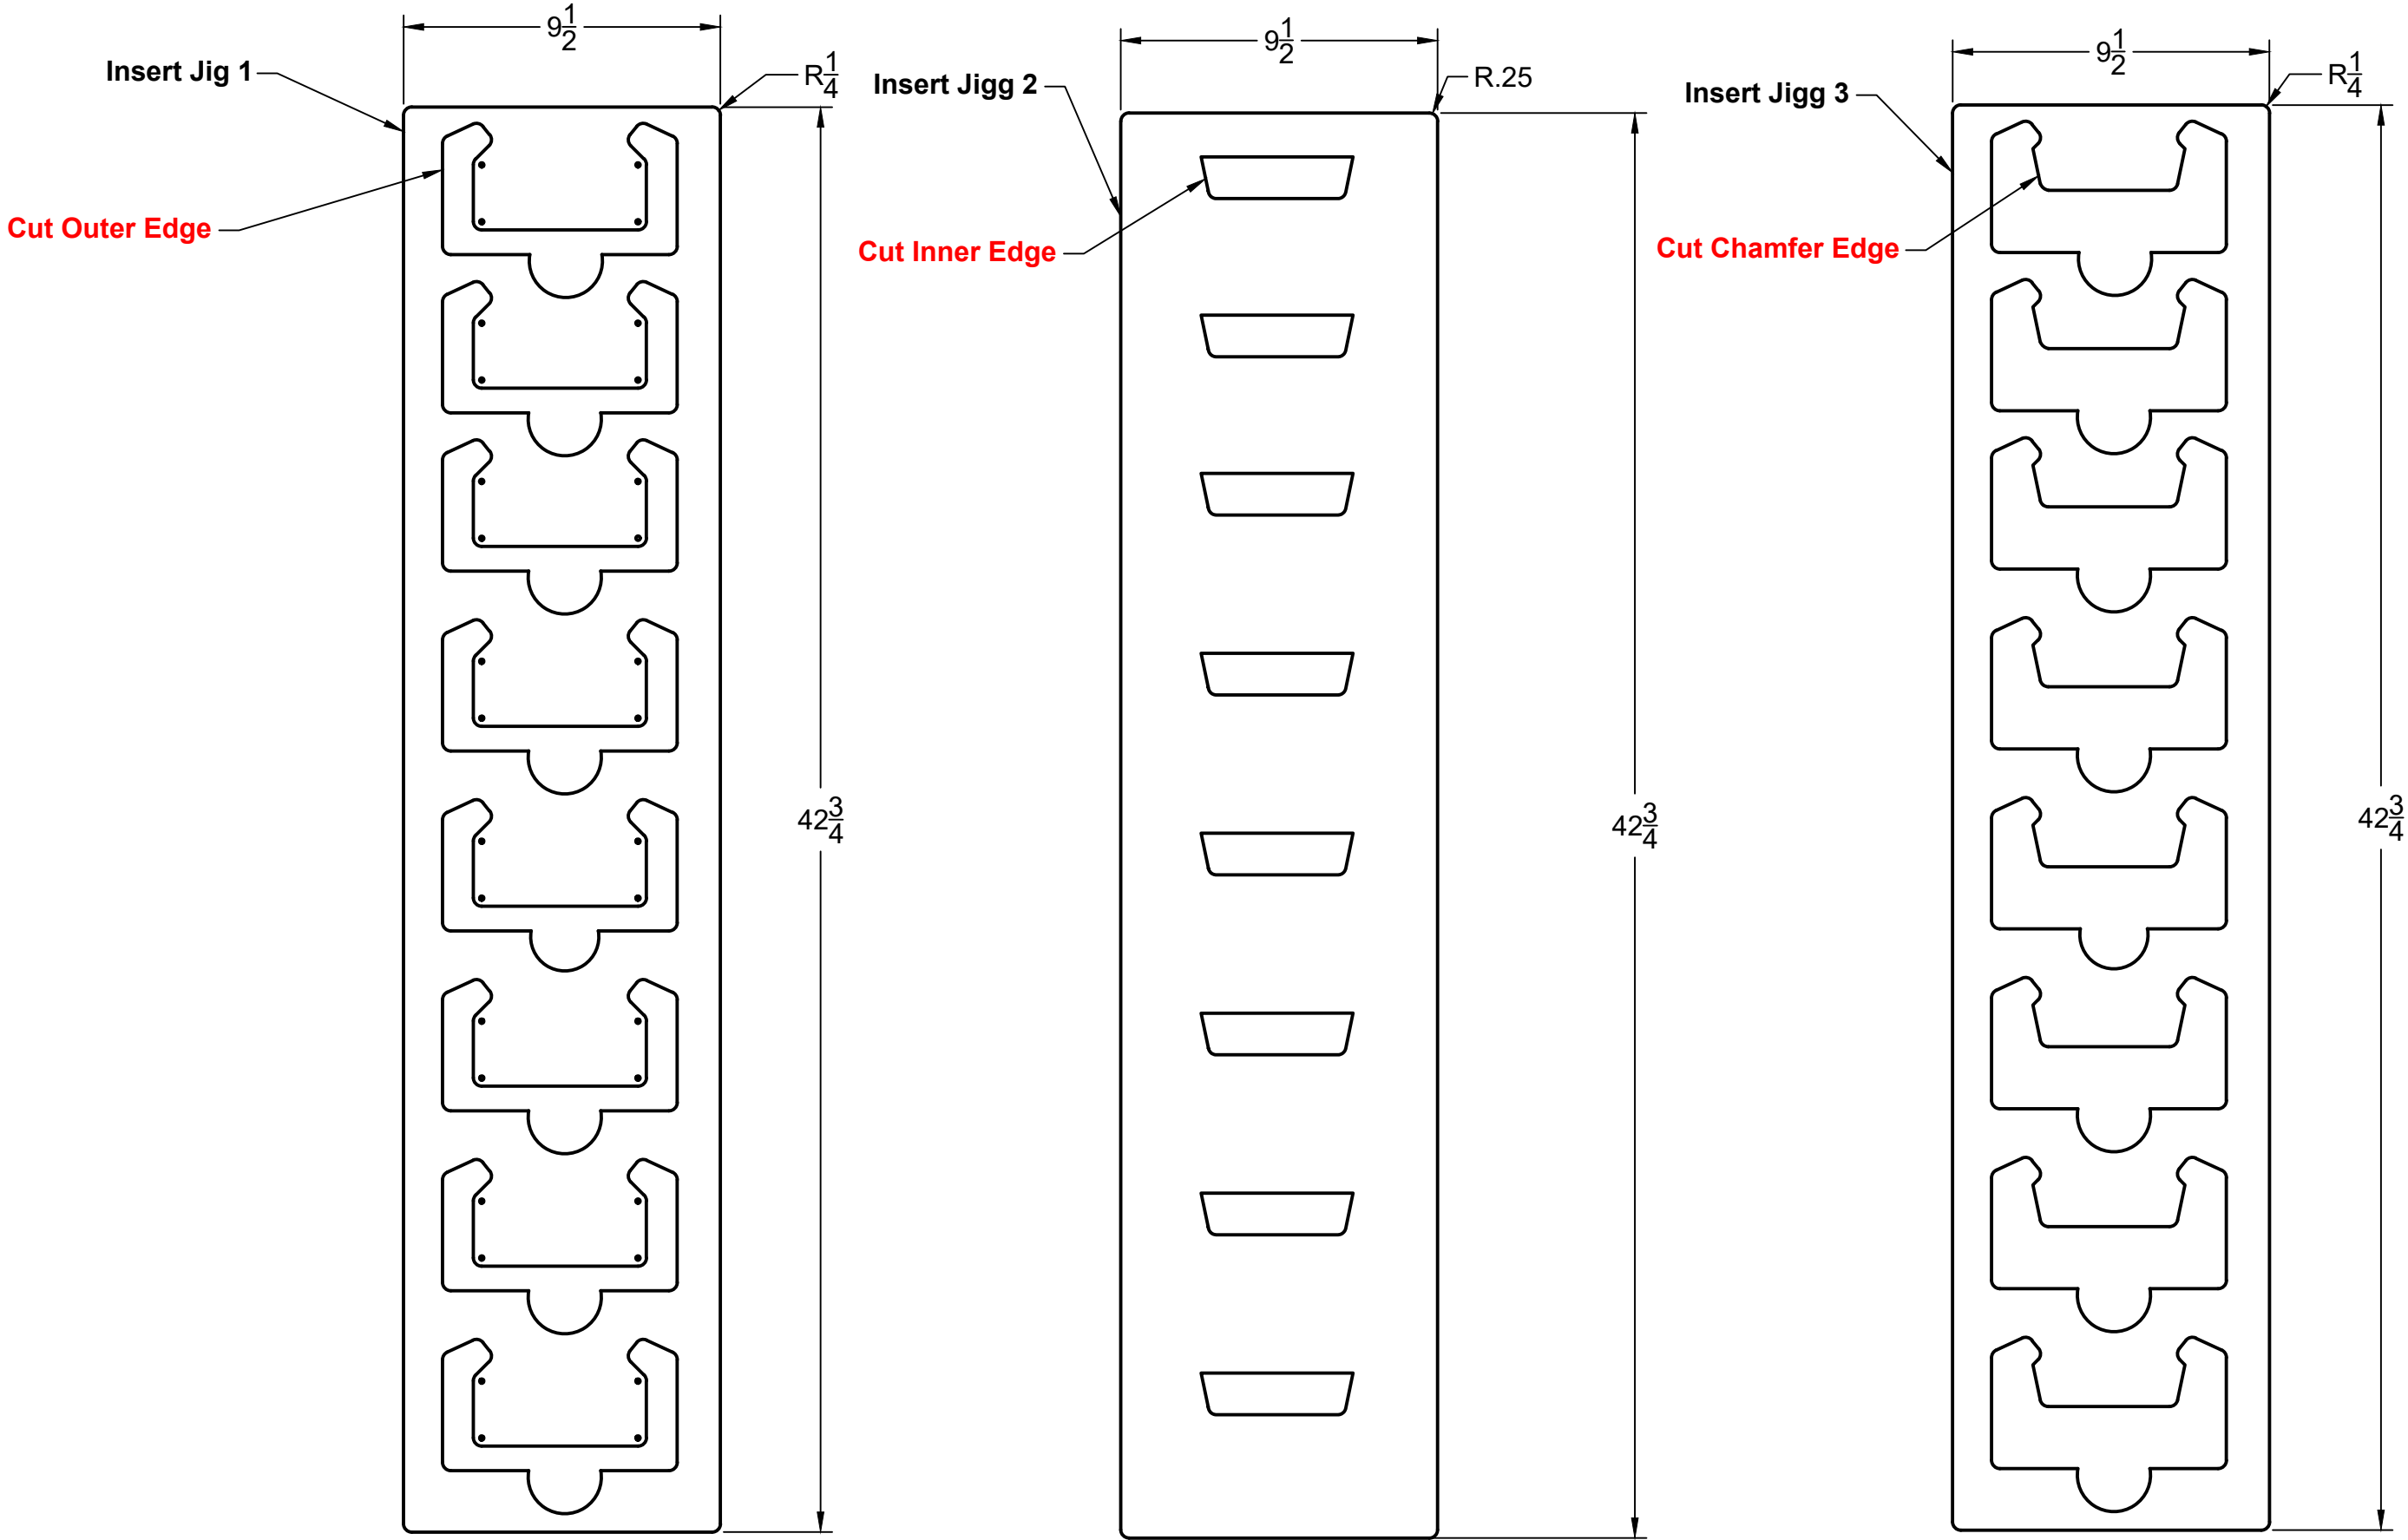

The top frame is designed with a CNC-machined lip, which allows for the insertion baseplate for jigs.

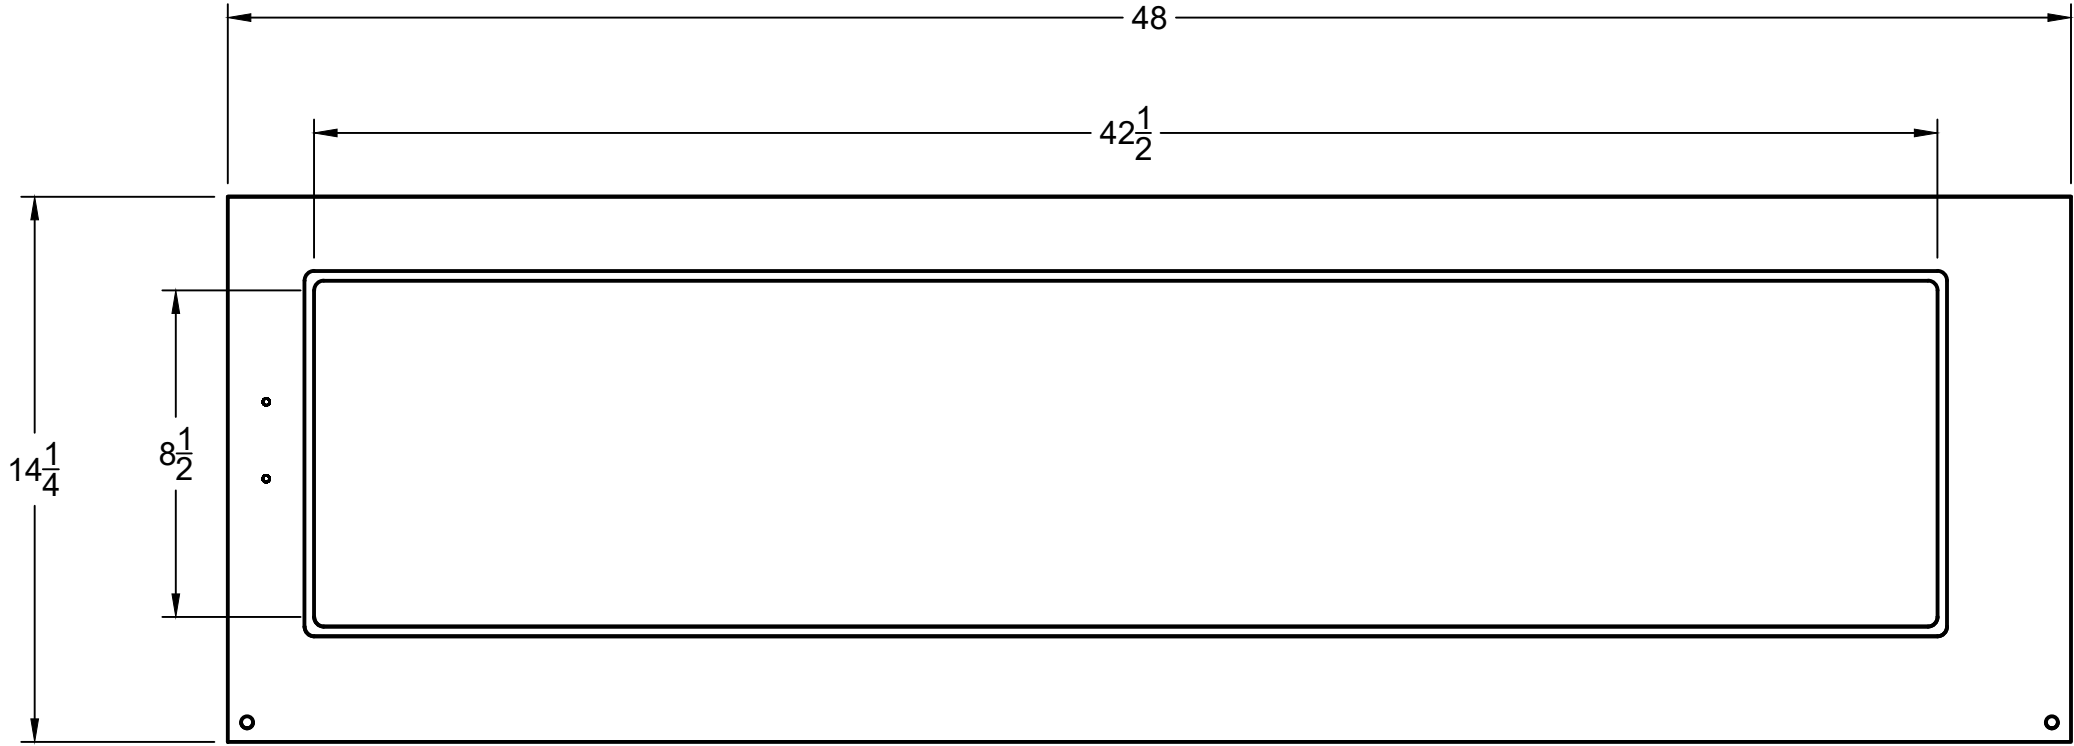

Piano Hinge

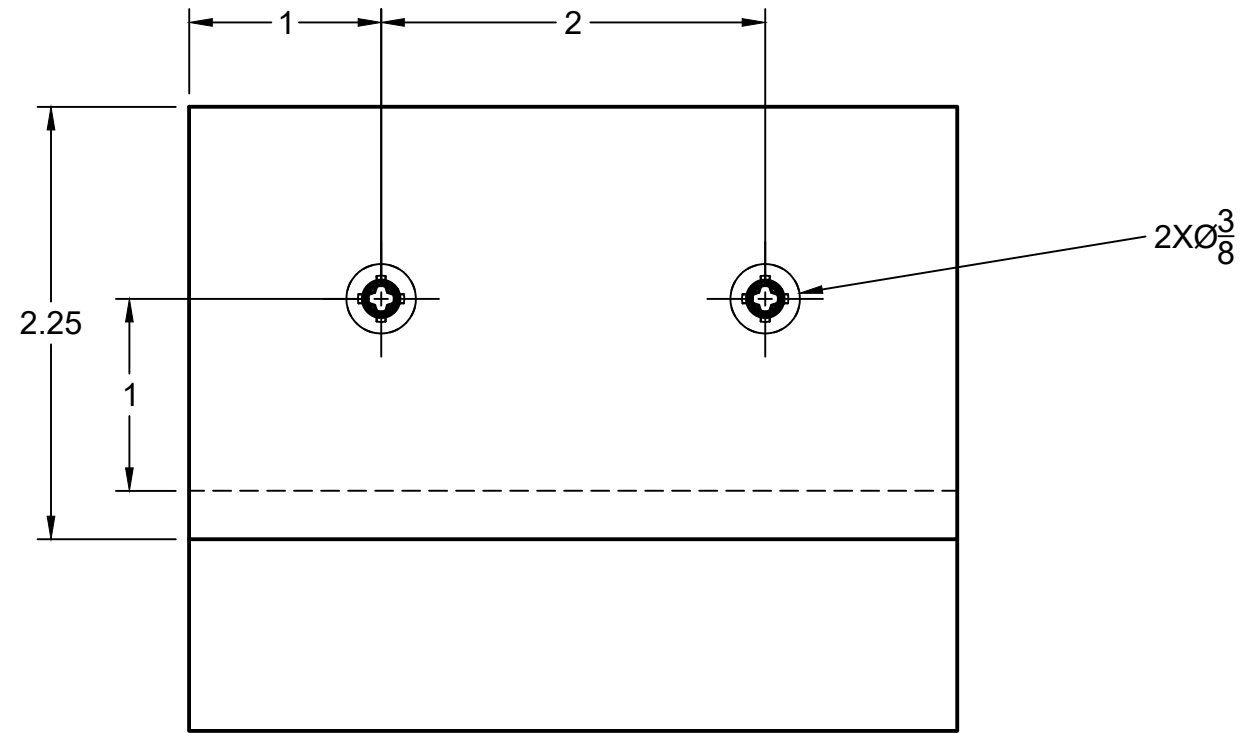

The left side of the top frame has to be seam-welded together with the piano hinge.

Spacer Blocks(1)(2)(3):
The purpose of spacer blocks is to support the top frame and hold the insert jig in place. Additionally, the spacer blocks aid in aligning the jigs and serve as the baseplate position for the jigs.
